

## Federal and Provincial/Territorial Income Taxes Payable by Individuals at Various Levels of Taxable Income — 2024

(Prepared from information available as of June 7, 2024)

This table shows the combined federal and provincial (or territorial) income taxes payable, including surtaxes, assuming only the basic personal tax credit (see footnote 1 below) is claimed (except for non-residents — see footnote 3 below), and that all income is either interest or ordinary income (such as salary). When income includes at least \$1,433 of salary, the Canada Employment Credit, described under **Non-Refundable Personal Tax Credits — 2024** (see table), will reduce the results shown by \$215 (\$179 in Quebec). The amounts do not take into account employee payroll taxes or provincial health levies (see **Provincial Health Care Premiums — 2024**). Depending on the types of income and deductions, the alternative minimum tax (AMT) may apply.

(1) The amounts in the table reflect the enhanced federal basic personal amount of up to \$15,705, if taxable income is under \$246,752 (see note 7 under **Non-Refundable Personal Tax Credits – 2024**). Yukon has paralleled this federal enhancement.

(2) These provinces have low-income tax reductions, which may decrease some amounts shown.

(3) This table assumes the non-resident will not qualify for the federal basic personal tax credit of \$14,156 (or the enhanced federal basic personal tax credit of up to \$15,705). Non-residents can claim this credit only if all or substantially all (i.e., 90% or more) of the non-resident's worldwide income is included in his or her taxable income earned in Canada for the year. The non-resident amounts apply to income taxable in Canada that is not earned in a province or territory.

(4) Non-resident rates for interest and dividends apply only in limited circumstances. Generally, interest (other than most interest paid to arm's length non-residents) and dividends paid to non-residents are subject to Part XIII withholding tax.

(5) The top marginal capital gains tax rates in this table will be 33½% higher for the portion of capital gains realized after June 24, 2024 that exceed an annual \$250,000 threshold (e.g. Alberta's top capital gains rate of 24% will instead be 32% [24% x 1½]).

(6) When personal tax credits in addition to the basic personal tax credit are available, the results in this table are too high. The maximum value of the dividend tax credit is determined by multiplying the dividend tax credit rate by the amount of eligible dividends (grossed up by 38%) or of non-eligible dividends (grossed up by 15%). The maximum value of other personal tax credits is determined by multiplying the other tax credit rate by the amount of those other personal tax credits. The maximum values reflect the surtax rates levied by Ontario (except for dividend tax credit rates, which are calculated before surtaxes). Charitable donations over \$200 have a higher maximum value.

(7) Taxable income may differ for federal and Quebec purposes, in which case the amounts shown in the table may require adjustment.

(8) For Nova Scotia, the amounts reflect the increase in Nova Scotia's basic personal amount from \$8,481 to up to \$11,481, if taxable income is under \$75,000 (see note 10 under **Non-Refundable Personal Tax Credits – 2024**).
